Modern Staircases

Create your dream feature staircase, explore the unusual, walk the path of innovation and be the envy of the unadventurous.

Limitations are distant horizons when combining nature's hardwoods and stones with contemporary stainless steel, bronze, brass and glass.

Original, modern, conceptual designs do not necessarily result in a large budget.

Allow our designers to explore with you a staircase with a difference.

▲ An elegant, modern, elliptical staircase, featuring American White Oak treads and opaque glass risers. The toughened glass balustrade is complemented by a highly polished, stainless steel hand rail which could equally be in matching timber. The strings were decorated with an unusual metallic silver by our special effects artist.

◀ A highly popular, modern staircase offering many flexible design options. Clients can choose to have plain glass (as illustrated) or an obscure finish, or even a design etched into the glass.

A hardwood handrail is optional. The polished, stainless steel strings can even be replaced by mild steel where the budget requires.

Classic Staircases

Marble staircase with nickel balustrade and handrail.

The White Ash treads and handrail complement the bronzed gothic style balustrade, giving an Italian flavour to this beautiful staircase.

Commercial Staircases

We manufacture a complete range of spiral staircases for both commercial and domestic applications.

These stairs were manufactured for the Honda showroom in Huddersfield. As an interesting final touch, we added the Honda logo to the risers!

This staircase enhances a prestigious car showroom. We have installed similar staircases in both offices and private residences. The staircase can be further customised from a comprehensive range of options.

Handrails

Our joinery shop manufactures stair components, ensuring the highest quality in both materials and workmanship. Our traditionally carved handrails are beautiful crafted and are quicker and more cost effective to produce than CNC machined equivalents. Timber components are perfectly fitted to each staircase prior to delivery, minimizing expensive on-site fitting.

Why Demax?

The complete service

Design and manufacture
of feature staircases

Architectural metalwork

Consultancy and project management

Design and CAD to full walk-through
